Leica M720 OH5

A Paradigm Shift in Vision, Comfort, and Flexibility
Premium Surgical Microscope for Microsurgery
A Paradigm Shift

- Comfort through ergonomic design
- Brilliant images
- Unsurpassed patient safety
- Intraoperative fluorescence
- Viewing for the entire OR team
- Positioning flexibility
- Superior maneuverability
For years, surgeons have needed a surgical microscope with smaller, more compact optics. Traditional microscope design has evolved over the years using large, vertical optical zoom lens systems, which have inherently limited the surgeon’s amount of working room, and the ability to work in the right ergonomic position. With the Leica M720 OH5, Leica Microsystems writes a revolutionary new chapter in microscope innovation. At the heart of the innovation: Horizontal Optics Technology.

Leica M720 OH5
A Paradigm Shift in Vision, Comfort, and Flexibility

The heart of the innovation: Horizontal Optics Technology reduces the size of the optical head and gives the user more space to work. At the same time it dramatically increases comfort.
Leica M720 OH5
Comfort Through Ergonomic Design

The Leica M720 optical head is the most compact of all neurosurgical microscopes. Designed along a horizontal plane, the compact optics carrier helps the surgeon naturally align for a healthier working posture. Whatever the position of the patient, even sitting upright, the surgeon can see more, can work more precisely, and benefits from superior ergonomics.

Compact Horizontal Optics
The substantial gain in free working distance gives the surgeon unobstructed access to the surgical area, greater instrument maneuverability, and an optimal view.

Butterfly Binoculars
Leica’s butterfly binoculars accommodate all body heights, for both the surgeon and the assistant, as well as the most challenging surgical positions. The tubes have an inclination range of 115°, and the eyepieces swing to a second viewing plane quickly and easily.

SpeedSpot™
Two laser beams act as a focusing reference to quickly provide a defined focus point for all three viewing ports (surgeon, assistant, and camera).
Light
Where You
Need It
The Leica M720 OH5 is equipped with Small Angle Illumination (SAI) to distribute more light to the bottom of deep cavities. SAI provides a concentrated light beam, closely aligned to the optical axis.

Combined with outstanding Leica APO OptiChrome™ optics, the result is significantly improved depth perception and better light penetration, specifically for new surgical access techniques such as intra-tracheal, transsphenoidal or METRx™. Images have outstanding contrast, brilliance, sharpness, resolution, and color fidelity.

**Enhanced 3D Images:**
Depth perception is improved thanks to Leica’s large stereo base of 24 mm, creating a more true-to-life 3D effect compared to other microscopes.

**Small Angle Illumination (SAI)**
SAI distributes light more evenly, and reduces shadows in the surgical field, providing:

- Deeper light penetration
- Increased detail visibility
- Improved depth perception

*e.g. transsphenoidal surgery, general illustration*
Safety Without Compromise
Leica M720 OH5
Unsurpassed Patient Safety

The Leica M720 OH5 offers innovative illumination solutions to improve outcomes for both the surgeon and the patient.

**Dual independent light sources [1]:**
The Leica M720 OH5 features two completely independent 400 W xenon arc-lamp illumination systems, giving the surgeon confidence to know that surgery will not be jeopardized due to lamp or board failure.

**Fast system reboot:** If the power cable becomes disconnected for any reason, the system reboots in the fastest reset time available today.

**Intuitive user controls [2]:** The graphical user interface and hard keys allow the user to conveniently and intuitively control all microscope functions during surgery.

**Independent microscope controls:** Stand, video, light, and microscope controls work independently. For example, should the video system fail, surgery can continue because the light and microscope are unaffected.

**Antimicrobial surface coating [3]:** Leica’s AgProtect ™ limits user exposure to surface pathogens. This nano silver coating covers the microscope’s outside surfaces and penetrates the membranes of microbes to prevent replication.

**ILLUMInATIoN SETTInG**

</tbody>
</table>

**BrightCare Plus – Light Intensity**

BrightCare Plus optimizes the light intensity relative to the working distance. As working distance decreases, the light intensity is reduced automatically, minimizing incidents of patient burns. As working distance increases, the light intensity rises again accordingly.

**AutoIris™ – Light Diameter**

AutoIris™ automatically adjusts the diaphragm so that only the visible area is illuminated. When zoomed in, the light circle adapts automatically: the higher the magnification, the smaller the light circle. This prevents the possibility of drying or burning exposed tissue, outside of the actual field of view.
Invisible Becomes Visible
Fluorescence technologies provide intraoperative information to the surgeon and OR team, directly through the microscope eyepieces or on a monitor. The information gained allows the surgeon to make faster progress in work, increase surgical precision, and improve patient outcomes. Switching between white light and fluorescence mode requires only the push of a button on the hand grip or foot control. The Leica M720 OH5 is well prepared for new and future types of surgical fluorescence, with a selectable third fluorescence mode.

**Oncological Fluorescence**
Leica FL400* intraoperative module is used in conjunction with 5-ALA fluorescent agent to show tumor cells, and thus enables much higher accuracy with tumor resection.

**Vascular Fluorescence**
Leica FL800* intraoperative videoangiography module is used in conjunction with ICG fluorescent agent and allows surgeons to see blood flow through vessels in real time during surgery.
**HD Documentation Systems**

The Med X Change HDMD® 1080p or 720p is a user-friendly digital recording system for the surgical environment. The 1080p version records videos in Full HD and detects ICG automatically. Image and video files can be transferred to a USB, external hard drive or wirelessly to an Apple® device within seconds.

**Leica Video Adapters**

Leica HD video adapters offer intraoperative fine focus and manual or remote control, to always achieve crisp and clear image quality in documentation.

**Integrated HD Monitor**

The Leica M720 OH5 features a built-in, movable video monitor arm with three rotation axes and an inclination axis to easily maneuver the large video screen into the perfect position for all viewers.

**3D Documentation System**

The TrueVision® 3D Surgical* system combines 3D visualization and guidance software applications focused on improving accuracy, efficiency, and outcomes for both surgeons and patients.

Leica M720 OH5
Viewing for the OR Team

Leica M720 OH5 OpenArchitecture™ allows for easy upgrades of rapidly evolving imaging technology. User-friendly operation ensures easy recording and editing of videos and photos for presentations, teaching, or medical records.

IGS Integration
The Leica M720 OH5 includes mechanical and electronic interfaces to accept and easily integrate commonly used image-guided surgery (IGS) systems and their tool tracking capabilities.

Leica DI C700
The Leica DI C700 dual imaging color module allows the surgeon to inject data directly into the eyepiece, from external and internal sources, such as MRI, CT, IGS, endoscopes and Leica FL800 video sequences. The data are displayed with the highest resolution and contrast currently available.
Leica M720 OH5
Positioning Flexibility to Suit Surgeon and OR Staff

The Leica M720 OH5 provides ultimate positioning flexibility with the highest overhead clearance and longest reach of any surgical microscope on the market. Superior reach and a compact footprint, give the surgeon positioning flexibility to place the microscope wherever it is most beneficial for the surgery. Alternatively, the Leica OHC5 ceiling mount option optimizes performance in space-restricted ORs.
Freedom of Positioning

Efficiency in Work: The compact base of the Leica M720 OH5 creates a smaller footprint, yet provides superior reach and ample overhead clearance to work in comfort during any surgical case.
Precise Movement
Leica M720 OH5
Superior Maneuverability

The Leica M720 OH5 offers a greatly expanded range of movement in all dimensions, with intuitive functionality and minimal vibration at all magnification levels.

**Optics Carrier Tilt [1]**: The improved inclination angle combined with the most compact optical system provides the surgeon with unmatched comfort and gives much more flexibility for transsphenoidal and posterior fossa cases.

**Optics Carrier Lateral Movement [2]**: With the longest range of lateral movement available today, the surgeon can easily achieve the most challenging lateral approaches.

**ErgoLock™ [3]**: The main surgeon’s binocular tube can be easily locked in five defined positions, ensuring stability of an individual’s selected binocular position, especially when using the mouth switch.

**Mouth Switch (Optional) [4]**: The ergonomically-designed mouth switch allows the surgeon to easily position the microscope while leaving both hands free for surgery.

**Brakes**: Silent, high-precision electromagnetic Leica OH technology.

**Hand Grip [5]**: The ergonomic design and sturdy, all-metal construction of the hand grip ensure comfort and stability when moving the microscope.

**Foot Control (Optional) [6]**: For maximum mobility and for fast, easy adjustments, Leica Microsystems offers four models of foot controls: cabled or wireless, 12-function or 16-function.

**AutoBalance [7]**
The hard key “AutoBalance” on the stand saves valuable time. With only two pushes of one button, the system fully balances all six axes quickly and accurately.

**Intraoperative AutoBalance [8]**
A microscope may need rebalancing during surgery due to changing needs for the surgeon’s and assistant’s positioning. With one push of the AC/BC button, conveniently located above the optical head, the surgeon can rebalance in seconds, even through the sterile drape.
The Leica M720 OH5 / OHC5 surgical microscopes feature innovative Horizontal Optics Technology for more room to work, a Small Angle Illumination system for better depth perception, and an OpenArchitecture™ platform to integrate the newest imaging technologies such as Full HD.
ACCESSORIES (OPTIONAL)

Second observer | Stereo attachment to beam splitter for second observer
Binocular tube | Variable angle 30° to 150° for second observer
Video adapter | Leica Manual Video Adapter (MVA), 55 mm, 70 mm, 107 mm focal length, c-mount, with fine focus
| Leica Remote Video Adapter (RVA), 55 mm, 70 mm, 107 mm focal length, c-mount, with fine focus
| Leica Zoom Video Adapter (ZVA), 3:1 zoom, 35 mm to 100 mm focal length, c-mount, with fine focus
| Leica NIR Dual Video Adapter (DVA), 60.5 mm, 79.5 mm focal length, c-mount, with fine focus

Autofocus | The Leica Video-Analysis Autofocus gives the surgeon more precision and greater control by means of keeping the image crisp and clear.

Image injection | Leica DI C700 high-resolution, true color dual imaging module for correlated and non-correlated data display, resolution 1024 x 768 pixels, color depth 24 bit, gray scale 256, contrast >= 1:300, color temperature 2500° – 9000° K

Asepsis | Sterilizable protective glass cover for the objective, sterilizable asepsis components for all drive knobs, commercially available drapes (specifically designed for the Leica M720)

Laser | Laser micromanipulator available from 3rd party

IGS | Interface / Open architecture for IGS systems

er

FLUORESCENCE* (OPTIONAL)

Vascular fluorescence | Optional Leica FL800 is available in the USA, EU, and most other countries

Oncological fluorescence | Optional Leica FL400 is available in the EU, and some other countries
* Please check the status of regulatory approval for your country with your local Leica Microsystems representative

LEICA OHS FLOOR STAND

Type | Floor stand with six electromagnetic brakes
Base | 720 mm x 720 mm with four 360° rotatable casters of 130 mm diameter each; one central single step foot brake
Balancing | “No brake release” Auto-balance
One button / two pushes for complete, automatic balancing of stand and optics

Intraoperative re-balancing | AC/BC button for automatic intraoperative re-balancing of AC axis and BC axis

Swing arm | Patented advanced movement system for perfect balance in six axes, vibration-dissipating technology

Floor stand control unit | New generation touch panel technology. The latest electronics control for the continuous operation of all motorized functions and illumination intensity. Data displayed via LCD. Built-in BrightCare Plus technology for working distance synchronized illumination control. ISIS™ Intelligent Setup System, menu selection based on unique software for user-specific configuration, with built-in electronic auto-diagnosis and user support. Software-independent hard keys for illumination and autobalancing; indicator for main / backup illumination and fluorescence mode. Open architecture for future software developments.

Light source | 400-Watt dual xenon arc-lamp illumination system and built-in, automatic (after notice), lamp quick changer

Controls | 10-function pistol grips for zoom, focus, all-free release of six brakes. Side button to control three user-defined brakes, motorized lateral tilt and inclination (XY), and Leica DI C700 functions. Except for the all-free button, all functions are freely programmable.

Mouth switch for three brakes (XYZ) (optional)

12-function foot pedal with controls arranged longitudinally or transversely, 16-function foot pedal with controls arranged transversely, wired or wireless (optional)

Hand switch (optional)

Integration of documentation | Prepared for integration of video and digital recording systems. Open architecture

Connectors | Numerous built-in connectors for video, IGS, and control data transfer
| 12 Volt DC, 19 Volt DC, and AC connections

Carrier for monitor | 700 mm Ising

Flexible arm with 4 axes for rotation and inclination to carry optional video monitor

Materials | All-solid metal construction

Surface coating | Covered with antimicrobial coating (AgProtect™)

Range cantilever | Max. 1925 mm

Load | Min. 8.0 kg and max. 11.7 kg of accessories to the microscope

Weight | Approx. 310 kg as a fully configured system

Storage dimensions | 1945 mm (height) x 1395 mm (width) x 830 mm (depth)

AMBIENT CONDITIONS

In use | +10° C to +40° C (+50° F to +104° F)
| 30 % to 95 % relative humidity
| 500 mbar to 1060 mbar atmospheric pressure

Storage | −40° C to +70° C (−40° F to +158° F)
| 10 % to 100 % relative humidity
| 500 mbar to 1060 mbar atmospheric pressure

LIMITATIONS OF USE

The Leica M720 OHS surgical microscope may be used only in closed rooms and must be placed on a solid floor. It may not be used in Ophthalmology.

CONFORMITY

Medical Electrical Equipment, Part 1: general Requirements for Safety IEC 60601-1; EN 60601-1; UL60601-1; CAN/CSA-C22.2 NO. 601.1-M90.

Electromagnetic compatibility IEC 60601-1-2; En 60601-1; UL60601-1-2; EN 60601-1-2.

Leica M720 OH5

Leica M720 OHC5
A Paradigm Shift in Vision, Comfort, and Flexibility
The fruitful collaboration “with the user, for the user” has always been the foundation of Leica Microsystems’ innovative strength. On this basis, we have developed our five corporate values: Pioneering, High-end Quality, Team Spirit, Dedication to Science, and Continuous Improvement.

MEDICAL DIVISION
What does a surgeon expect from an outstanding surgical microscope? Sharp, clear images, and a modular system aligned with the surgeon and OR staff needs.

Innovations for your practice
From the first surgical microscope with widefield optics in the 1980s to the first microscopes with Horizontal Optics and with LED illumination, Leica Microsystems has been at the forefront of innovation in the development of surgical microscopes.

HD video, fluorescence and retinal viewing systems also demonstrate the continued innovative nature of the Leica team. We strive to provide the surgeon with leading edge technology to enhance performance, surgeon comfort, and patient outcomes.
